Operating Instructions for Visitor Phone Entry Unit

a. Guest Instructions

Your name and/or phone number have been programmed into the telephone entry system under a specific DIRECTORY CODE. This directory code can be from 1 to 4 digits long depending on the needs of the application. When a guest comes to visit you, they will look up your name in the directory. Your DIRECTORY CODE will be shown to the right of your name. Your guest will enter this code on the system keypad that will cause the system to place a call to your home. (If your guest already knows your directory code, they can simply enter the code on the keypad without having to look up your name). Instructions on the telephone entry systems guide guest usage of the system and how to locate and call the resident that they wish to visit. The systems utilize A and Z scroll buttons that a guest will use to locate the resident that they are wishing to visit. Pushing the A button will cause the resident directory to scroll up while pushing the Z button causes the resident directory to scroll down. Holding these buttons down will cause the system to scroll or page through the resident directory rapidly through the alphabetical listing of all residents.

When the desired resident's name is displayed on the page, the A and X buttons are used to move the PUSH CALL cursor up and down. When the PUSH CALL cursor is flashing on the desired resident's name, the guest can then press the CALL button and the system will connect to the resident's telephone. The guest may also enter the directory code on the system keypad to place the call. If the resident's line is busy, the system will emit a busy signal. If this happens, the guest can press the # key or the CALL button to hang up and then try again. Residents can avoid missing calls (and guests) from the telephone entry system by ordering call waiting from the local telephone company.

b. Resident Instructions

Resident control of the door or gate that the telephone entry system controls is limited to opening the door or gate in response to a call from a guest.

c. Responding to a Guest Call

When communication is established, the resident has the option of opening the door(s) or gate(s) by pressing the number "5" key/button on their touchtone telephone, or they can deny access to the guest by pressing the "#" key on their telephone. If access is granted, the resident will hear a confirmation tone in their handset indicating that the door or gate has opened followed by the system automatically hanging up.

Residents should always press the # key on their telephone if they wish to deny a guest access. If the resident hangs up to deny access instead of pressing the "#" key, the telephone entry system will remain on line until its programmed talk time expires or until it detects dial tone.

Some newer type telephones emit a short tone rather than a continuous tone when their keys are pressed. This may cause the telephone entry system to not respond to the pressing of the phone keys. If this happens, simply press the key twice in rapid succession to open the door or gate. If a resident is using a rotary dial telephone, they will grant access to their guest by dialing "5". To deny access, residents with rotary phones must simply hang up.

Please Note: If the phone isn't ringing or it is going straight to voice mail that is not a gate issue, that is a provider issue or a signal issue.
